## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The information disclosure statement filed 01/29/04 fails to comply with 37 CFR 1.98(a)(1), which requires the following: (1) a list of all patents, publications, applications, or other information submitted for consideration by the Office; (2) U.S. patents and U.S. patent application publications listed in a section separately from citations of other documents; (3) the application number of the application in which the information disclosure statement is being submitted on each page of the list; (4) a column that provides a blank space next to each document to be considered, for the examiner's initials; and (5) a heading that clearly indicates that the list is an information disclosure statement. The information disclosure statement has been placed in the application file, but the information referred to therein has not been considered.

### ***Drawings***

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the voltage down-converter, voltage conversion circuits, conversion-bypass control circuits, plurality of signals as input, semiconductor substrate, necessary voltage conversion and control circuits, switching device transistors fabricated in semiconductor process employed to fabricate the common semiconductor substrate, switching regulator, linear regulator, signal communication devices wireless RF, optical and non-contact signal communication method through a common package substrate, filter capacitor, electro-

chemical, electro-thermal, electro-mechanical and electro-optic devices must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Hutson (3,184,653).

Hutson disclose a switching circuit as claimed in Figs. 8-13. Fig. 8 discloses a first switch (100), bypass switch or second switch (104), inductor (58), first switch and inductor are in series, first switch (100) connected to the input power node at joint of (103, 53 and 107) and bypass switch or second switch (104) also connected to the input power node and the second end of the bypass switch or second switch is connected to joint (71) and the inductor other end is also connected to the same joint (71).

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ta Huang et al. (4,191,986) in view of Muramatsu et al. (2005/0062434).

Ta Huang et al. teach the claimed invention except that a diode instead of a transistor as a switching device. Muramatsu et al. show that a transistor is an equivalent device known in the art. Ta Huang et al. teach a power line transient suppressors in Fig. 2. Input node is the joint point of the two diodes (24 and 25) and both the diodes are connected to the two inductors (21 and 22) which is connected to the output terminal (which is connected to the load). Therefore, because these two devices

were art-recognized equivalent at the time the invention was made, one of ordinary skill in the art would have found it obvious to substitute a diode for a transistor.

***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
